DETAILED ACTION

1. Claims 1, 2, 6 and 7 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Akira et al (JP 61-31324, see English language abstract)).

Akira et al discloses a process of making an optical fiber. A silica soot body having an inner soot core up-doped with GeO and an outer core of pure silica is heated in an atmosphere free of F at 1300 °F, i.e., temperature below vitrification to dehydrate the soot body. The soot body is subsequently heated in an F atmosphere at a temperature sufficiently to vitrify the body and to dope the outer core with F. While there appears to be no explicit recitation that the soot body is porous, it is well known fact that it is and thus the claims are anticipated or at the least, it is obvious that the soot body is porous to allow F to diffuse into the out core.

2. Claims 3-5, 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akira et al (JP 61-31324).

The claimed cooling step of claims 3 and 9, and claim 8 are obvious matter of process optimization. The F agents of claims 4 and 5 are obvious since they are well known F doping agents.
